DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to an earth working bucket, classified in class 037, subclass 403.
- II. Claims 10-13, drawn to a method for conducting dissimilar soil management activities including excavation and subsoiling, classified in class 037, subclass 195.
- III. Claims 14 and 15, drawn to a method for preparing an area having soil compaction for reforestation in a single pass over said area with an implement, classified in class 037, subclass 200.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus that does not require at least one fastener. The apparatus as claimed can be used to practice another and materially different process that does not require a path to be at a depth of approximately 24-30" below the soil surface.

Inventions III and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus that does not require at least one fastener. The apparatus as claimed can be used to practice another and materially different process that does not require an area of reforestation that is selected from the group consisting of a forest road, skid trail, a landing and a legacy compaction area.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require an area of reforestation that is selected from the group consisting of a forest road, skid trail, a landing and a legacy compaction area. The subcombination has separate utility such as in situations not requiring a path to be at a depth of approximately 24-30" below the soil surface.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicants are advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
